Hiring Manager

Oracle Cloud Infrastructure

Advanced Degree Software Engineer

Dear Hiring Manager,

I am excited to apply for the Advanced Degree Software Engineer position with Oracle Cloud Infrastructure. The chance to work on large-scale distributed systems and to design and build infrastructure that enterprises rely on is exactly the kind of challenge I want at this stage of my career. I completed my MS in Computer Science (AI specialization) at Southern Methodist University in December 2025 and am eager to bring my experience in web services, algorithms, and data-driven systems to OCI's June/July 2026 cohort.

My background aligns closely with what the role asks for. I am proficient in Java and Python and have designed and built REST web services, database-backed applications, and data pipelines across multiple projects—from a Java/Spring Boot system with 15+ API endpoints and normalized schemas supporting 25,000+ records to a Python/FastAPI application with validation pipelines over 10,000+ data points. I have worked in Agile environments with Git and code reviews, used Linux in coursework, and have demonstrated experience in algorithms, data structures, object-oriented design, database systems, and machine learning through my degree and projects. I am confident I can contribute to designing and implementing solutions from day one while learning OCI's stack and practices.

I want to be straightforward about where I am still growing. My strongest experience is in Java and Python rather than C or C++. I have a solid foundation in data structures, algorithms, and systems-oriented thinking from coursework and from building and deploying services; I am eager to deepen that in a production infrastructure setting and, if needed, to grow into systems-level languages with your team's support. I have not yet worked with compute platforms like Hadoop or Kafka, but I have built and shipped RESTful services, databases, and pipelines and am a fast learner with new tools and infrastructure. I am based in Charlotte and am fully willing to relocate to the Santa Clara or Seattle hub for this role.

I would be grateful for the opportunity to discuss how my background in web services, databases, and problem-solving can support OCI's mission and how I can grow into this role. Thank you for considering my application.

Sincerely,

Dimitri E. Lavin
